

RedFin Network OsCommerce Payment Module Install Guide

Module Requirements

1. You must have a valid account with RedFin Network
2. Your site must establish an https connection to secure.redfinnet.com
3. cURL must be compiled in PHP (check with your web hosts)

New Files

catalog/includes/modules/payment/redfin.php
catalog/includes/languages/english/modules/payment/redfin.php
catalog/cvv_help.php
catalog/includes/languages/english/cvv_help.php
catalog/images/cvv_help1.jpg
catalog/images/cvv_help2.jpg

Edits You Need To Make

In catalog/includes/ilenames.php add this line before the closing ?>:

```
define('FILENAME_POPUP_CVV_HELP', 'cvv_help.php');
```

In catalog/checkout_process.php (line 49) CUT OUT the two lines:

```
-----  
// load the before_process function from the payment modules  
$payment_modules->before_process();  
-----
```

and paste them BELOW (line 55)

```
-----  
$order_totals = $order_total_modules->process();  
-----
```

so it should look like:

```
-----  
require(DIR_WS_CLASSES . 'order_total.php');  
$order_total_modules = new order_total;  
  
$order_totals = $order_total_modules->process();
```

```
// load the before_process function from the payment
modules

$payment_modules->before_process();
```

That's all there is to installing the files

Set Up

Once you've installed the new files and applied the edits to two other files go to your osCommerce 'admin' panel, go to Modules --> Payment, click once on the RedFin Network link, and then click to Install.

When you've done that, click on 'Edit' and set up as follows:

1. **Enable Redfin Network Module** - Set to 'True'
2. **Login User Name** as provided to you by RedFin Network
3. **Login Password** provided to you by RedFin Network
4. **Transaction Mode** is initially Test. Once the payment process is running properly, change it to Live mode.
5. **Authorization Type** - mandatory setting is "AUTHORIZE_CAPTURE" (do not use "Authorize Only")
6. **Request CVV Number** - recommended setting is True
7. **Sort Order Of Display** - set to zero to make this module appear above other payment modules.
8. **Payment Zone** - if you enable this then only payments within the selected zone will be approved.
9. **Set Order Status** - leave set to Default or set to an order status of your choice.
10. **CURL Proxy IP Address** - If your provider requires the use of a CURL proxy, enter the full URL here, otherwise leave it set to none.
11. Click **Update** and you're done installing here.

Additional Info

Please refer to the documentation provided to you by RedFin Network on how to set up your account interface with them. It cannot be covered here.

Run adequate testing **before** you put your account **Live** with RedFin Network.

YOU ARE RESPONSIBLE for the security of all sensitive information handled by this module and your shopping cart!

This Contribution is provided on an 'as is' basis. I make no guarantee that it will work on your website, and accept no responsibility if you decide to install it on your website.

Most of the credit for this module goes to the original osCommerce Team who wrote the payment module(s) upon which it is based.
